MEMORANDUM

SUBJECT: Review of Cherokee County Data - May Samples

FROM: Gale Wright
Chief, Remedial Section

TO: Ralph Langemeier
Chief, Drinking Water Branch

Ed Skowronski
CDC

Early this month, we began sampling all the private wells in the Galena area of the Cherokee County site that were not sampled in previous sampling episodes. The data from these samples will be received in two or three sets. Attached is the first set of data. Please note in the memorandum from Gerald McKinney that three of the thirty wells have metals above the MCLs.

ENSV is preparing to install individual treatment units in the households found in the original August 1985 sampling to have well water above the MCLs. Those wells were resampled in April 1986 before the decision was made to install the treatment units.

We would like you to review the data and make your recommendations to us on how the Agency should procede.
